Ira Pinkston met with a severe accident last Saturday evening, and in consequence is minus a part of the index finger of the right hand. John Saunders, one of the Saunders Brothers, who conducted the Saunders House in St. Joseph during the war and for some years after, died at Maryville and was buried there Sunday last. He was well known to many of our people who patronized his house, and no men in St. Joseph were more popular than John and Dick Saunders. They made money rapidly for their house was crowded by farmers and business men from "Up the Country." John Saunders was a little more than 57 years old at the time of his death. He was a native of Kentucky and a resident of Missouri since 1844, and passed his earlier years in Nodaway county, where he was married. The last ten years of his life were spent in Maryville where he was engaged in the banking business. He represented Buchanan county in the lower house of the Missouri Legislature at one time and acquitted himself creditably as a law maker. Many of our people will regret to hear of his death.

A case of considerable interest to men who insure their lives for the benefit of their wives was recently decided in St. Louis. The case was one in which a man had taken such a policy. His wife died, and he married again—having children by both marriages. At his death a dispute arose as to who was entitled to the insurance. The decision of the court was that, as the insurance was taken out for the benefit of the first wife her children alone were entitled to the money.

The Weather.

December 1889, takes the lead for high mean temperature over any in the past so far as the records show. The highest mean heretofore was 41.67° in 1877. This year it reached 43.09°. As compared with Nov. Dec. was the warmest month. The mean temperature of the former being 37.48° against 43.09° of the latter. The highest for November was 64° and for December 73°. The following table will show the years in which December temperature exceeded that of November.

YEARS.	NOVEMBER.	DECEMBER.
1882	37.21	37.31
1875	34.40	37.31
1871	37.02	41.67
1873	37.48	43.09

December 1889 will also be remarkable for one of the greatest changes in temperature known in so short a period. On the afternoon of the 23rd the thermometer registered 69°; on the morning of the 24th it registered 15°, a change of 53°.

This occurred within a period of 17 hours. Greater changes have occurred here, but never in so short a time. The effect of this may prove injurious to the fruit. The high temperature in December raised the mean for 1889 1.30° above the normal, which was 51.22°. Earth worms have been near the surface of the ground and came out on Christmas day greatly to the delight of fowls and birds who were glad to see them on that festive occasion. Robins and doves which usually emigrate to a more southern climate seem to be satisfied with the weather here and will remain if the weather will permit.

December 1889 was also remarkable for the small amount of its rainfall, 0.40 inches being all that was recorded. The mean for 34 years was 2.62 inches. The greatest amount recorded was 4.59 inches in 1870, the least heretofore 0.15 inches in 1875. December 1889 was also remarkable for the entire absence of snow. The least that has fallen heretofore was 1.14 inches in 1873, the greatest 23.75 inches in 1865. This year we had a very small amount on the 23d, so small it could not be measured.
